

CAPABILITIES PROPOSAL

Production-Grade AI Agents & RAG Systems

Most AI projects stop at demos.
We build systems teams can actually rely on.

4–6 wks

Scoped engagements

Fixed price

No open retainers

Day one

Evals & observability

THE PROBLEM

Your AI isn't working. Here's why.

Your team has workflows buried in docs nobody reads. Support questions get answered ten times over. Ops tasks eat engineering hours every sprint. Off-the-shelf AI hallucinates, breaks on edge cases, and can't plug into your stack. You need systems built for **your data, your tools, your team.**

WHAT WE BUILD

R Reliable RAG Systems

Turn your company knowledge into AI assistants that answer from the right sources, cite their work, and say "I don't know" when they should.

- Internal docs assistants
- Support knowledge copilots
- Product docs search

A AI Workflow Agents

Automate repetitive ops workflows with context-aware agents. They read your data, follow your rules, and hand work back to your team cleanly.

- Support ticket triage
- GitHub PR review agents
- Incident analysis assistants

HOW WE WORK

Three phases. No ambiguity.

-
- 01
Scope
- Define the workflow, audit data paths, and agree on what "working" means. No ambiguity, no open-ended discovery. **You get a clear spec before we write a line of code.**
-
- 02
Build
- Design retrieval pipelines, decision boundaries, evals, and failure modes from day one — not after launch. **Every system ships with observability and trace logging.**
-
- 03
Ship
- Deploy where the work happens — docs, queues, GitHub, internal tools. Production-ready, not demo-ready. **Your team owns everything: clean handoff, full docs.**
-

WHAT YOU GET

- ✓ Production-deployed system integrated with your existing tools
- ✓ Retrieval evals and trace observability built in from day one
- ✓ Architecture documentation and clean handoff to your team
- ✓ 4–6 week engagement, fixed price, no open-ended retainers

SEE IT WORKING

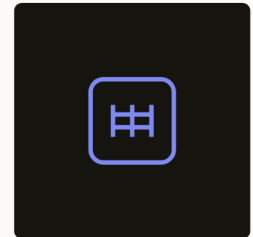

Live demos. Not slide decks.

• LIVE DEMO

RAG Knowledge Assistant

Ask questions over internal docs — see retrieval, citations, and confidence scores live. No canned responses.

weaveai.dev/examples#rag-knowledge-assistant

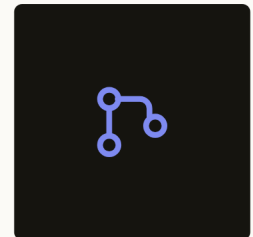

• LIVE DEMO

GitHub PR Review Agent

Reads diffs, checks repo conventions, and drafts review comments automatically. Runs on real repos.

weaveai.dev/examples#github-pr-review-agent

Ready to talk?

Book a 15-minute scoping call. No pitch — just your workflow and whether this fits.
